

Forbush on Nov. 12-13, 2012. Origin CME on Nov.9, 2012

A filament eruption + CME was observed around sunspot 1608, on Nov.9, 2012. This region is in a good Earth facing position and a Coronal Mass Ejection (CME) was visible. A portion of the cloud looks to be Earth directed. With a potential for an Earth impact by late on November 12.

On Nov. 13, 2012 all ground based NMs detected a Forbush event. However, according to the Tupy data this Forbush event was initiated already late on Nov. 12. The CME signal on ACE spacecraft was also observed late on Nov.12.
